

HARISH GOWDA K

Senior Software Engineer · Backend · Cloud · Distributed Systems

Bengaluru, India | +91 78921 93408 | harishgowdak18@gmail.com | [linkedin.com/in/harishgowdak](https://www.linkedin.com/in/harishgowdak)

SUMMARY

Senior Software Engineer with 9.5 years building scalable backend systems on AWS. Deep specialism in Node.js, Nest.js, event-driven architectures, and Kubernetes. Hands-on with AI-assisted development to ship faster without compromising quality.

STRENGTHS

- ◆ Event-driven architecture & high-throughput systems
- ◆ End-to-end feature ownership at senior IC level
- ◆ AWS serverless & IaC (CDK, CloudFormation)
- ◆ Mentoring engineers & raising code-review bar
- ◆ Pragmatic AI-tooling adoption across teams

CORE STACK

Languages & Frameworks

Node.js · Nest.js · TypeScript · JavaScript

AWS

Lambda · API Gateway · DynamoDB · S3 · EventBridge · SNS · SQS · Step Functions · ECS · EKS · EC2 · CloudWatch · IAM · VPC

Data & Caching

PostgreSQL · MySQL · Redis (ElastiCache)

IaC & DevOps

AWS CDK · CloudFormation · Docker · Kubernetes · GitHub Actions · Jenkins · CodePipeline · Git

Frontend (working knowledge)

React · JavaScript/TypeScript

AI TOOLING

Cursor · Claude · Gemini · GitHub Copilot

EXPERIENCE

Senior Software Engineer · Pro Football Focus

FEB 2025 — MAR 2026 Bengaluru, India

- Designed and implemented scalable backend services in **Node.js/TypeScript**, improving system throughput by **30%** and reducing latency by **20%** across high-performance distributed systems.
- Built serverless infrastructure on AWS using **CDK + PostgreSQL**, developing APIs supporting **10,000+ concurrent users**.
- Owned end-to-end delivery for **5+ critical features**, from architecture through deployment, with globally distributed teams.
- Contributed to **React-based frontend integration tasks** during bandwidth opportunities — collaborating with UI engineers on API contracts and helping ship full-stack slices end to end.
- Integrated **Cursor, Claude, Gemini, and GitHub Copilot** into daily workflow — refactoring, test scaffolding, architecture sounding-board, and design trade-off cross-checks — cutting feature lead time on routine modules by **~35%**.

Lead Senior Software Engineer · Virtusa

JUL 2021 — FEB 2025 Bengaluru, India

- Designed serverless architectures with **Lambda, API Gateway, DynamoDB, S3** — ensuring **99.99% availability** for critical enterprise applications.
- Built enterprise microservices in **Nest.js/TypeScript** with modular design, DI, and guards/interceptors — improving API maintainability by **40%** and cutting dev time by **25%**.
- Deployed containerized workloads on **Amazon EKS** with Helm, HPA, and ingress — achieving reliable multi-environment rollouts with **zero downtime**.
- Integrated **Redis (ElastiCache)** for distributed caching, sessions, and rate limiting — cutting API latency up to **60%** and DB load by **35%**.
- Led event-driven systems with **EventBridge, SQS, SNS, Step Functions, ECS** — processing **1M+ events daily**.
- Automated infrastructure with **AWS CDK and CloudFormation** — reducing deploy time by **50%** and cloud cost by **20%**.
- Adopted **Copilot and Claude** as standard team toolchain for boilerplate, test coverage uplift, and AI-assisted PR reviews — contributing to a **~25% reduction in review turnaround**.
- Mentored **7 junior engineers** on cloud architecture, CI/CD, and responsible use of AI coding assistants — prompt patterns, verification habits, knowing when not to trust the model.

Backend Developer · Soft Suave Technologies

DEC 2016 — JUL 2021 Bengaluru, India

- Built applications using **Node.js + AWS (EC2, S3, Lambda, RDS)**;

Daily use across coding, refactoring, testing, code review, and architecture exploration.

EDUCATION

B.E. in Electronics & Communication
Visvesvaraya Technological University
Graduated 2016

optimized MySQL queries, schemas, and indexes — improving DB performance by **30%**.

- Implemented IAM policies and SSL across AWS and DB layers — ensuring compliance and data integrity.

KEY PROJECTS

Player Props & First Touchdown Finder • PFF

- Player-prop analytics platform processing **10K+ historical records/season** with real-time sportsbook odds across **10+ markets** at sub-second latency. Cursor + Claude used for rapid prototyping and refactoring of legacy projection logic.

Digital Installment Lending (BNPL) • Virtusa

- Led design of a BNPL feature using **Lambda, DynamoDB, ECS, Nest.js on EKS**, supporting 3/6/9-month plans with Redis-backed idempotency for safe retries under peak load.

TIBCO → AWS Serverless Migration • Virtusa

- Migrated legacy TIBCO APIs to AWS serverless (**Lambda, API Gateway, DynamoDB, S3**) with CDK IaC. Used Claude and Gemini to accelerate analysis of unfamiliar legacy code and produce first-pass Node.js implementations for engineer review.

Future Dated Instruction (FDI) • Virtusa

- APIs to schedule one-time and recurring transactions (bill payments, transfers) with full CRUD, audit trails, and limit checks — built on **Lambda + DynamoDB + EventBridge Scheduler**.

Plug2Teams • Virtusa

- Serverless integration connecting Microsoft Teams to PBX/Contact Centre systems — adds a dial pad and enables calls to any number from any device.

Virujh & Delivery Management System • Soft Suave

- Healthcare consultation platform with doctor-patient video appointments and integrated payments; and a **GPS-based delivery tracking system** with real-time alerts, dashboard analytics, and barcoded invoices/PoD.

SELECTED OUTCOMES

- Built event-driven systems processing **1M+ events/day** at **99.99% availability**.
- Cut API latency up to **60%** and DB load by **35%** via Redis-based caching and rate-limiting strategy.
- Reduced deployment time by **50%** and cloud cost by **20%** through CDK-driven IaC and right-sizing.
- Drove team-wide AI-tooling adoption — **~25% faster PR reviews** and **~35% faster routine feature delivery**.
- Mentored **7 engineers** toward senior-level competence in cloud architecture, code quality, and pragmatic use of AI assistants.
